

Revolution: A Data-Driven Exploration of Apple iPhone's Impact in India (Using Tableau)

1. Problem Definition

- Apple Inc. has rapidly expanded in India, especially with iPhone manufacturing and rising sales.
- This project analyzes growth of iPhone sales in India, market share comparison, economic impact, and consumer trends.

2. Objectives of the Study

- Analyze yearly iPhone sales growth in India.
- Compare Apple's market share with competitors.
- Study pricing trends of different iPhone models.
- Analyze impact of local manufacturing (Make in India initiative).
- Visualize insights using Tableau dashboards.

3. Data Collection

- Government reports (Ministry of Commerce & Industry).
- Market research reports (Counterpoint, IDC).
- Apple annual financial reports.
- Export statistics and industry news.
- Data types include sales data, market share, production data, exports, and pricing.

4. Data Preparation

- Clean missing values.
- Remove duplicates.
- Convert currency into INR (₹).
- Format date columns.
- Create calculated fields (Growth %, Revenue Growth, etc.).

5. Tools & Technologies

- Tableau Desktop / Tableau Public – Data Visualization.
- MS Excel / CSV – Data storage and preprocessing.

6. Dashboard Design (Tableau)

- Sales Growth Dashboard – Line chart (Year vs Sales), Bar chart (Model-wise sales), KPI cards.
- Market Share Analysis – Pie chart (Brand comparison), Area chart (Trends over years).
- Economic Impact Dashboard – Export growth graph, Manufacturing units map, Employment statistics.
- Consumer Insights – Price vs Demand graph, Urban vs Rural sales comparison.

7. Key Performance Indicators (KPIs)

- Annual Growth Rate (%).
- Market Share (%).
- Export Revenue (■ Crores).
- Average Selling Price (ASP).
- Units Manufactured in India.

8. Expected Outcome

- Clear understanding of Apple's growth in India.
- Visual insights into premium market dominance.
- Understanding India's role as a manufacturing hub for Apple.
