

IRevolution

A Data-Driven Exploration of Apple's iPhone Impact in India Using Tableau

Focus: Data Flow Diagram (DFD)

1. Level 0 DFD (Context Diagram)

Main System:

IRevolution – iPhone Impact Analysis System

Input Data Sources:

- iPhone Sales Data (India)
- Customer Demographic Data
- Market Share Data
- Customer Feedback & Ratings
- Online & Retail Purchase Data

Process:

- Data Cleaning & Transformation
- KPI Calculation
- Customer Journey Analysis

Output:

- Interactive Tableau Dashboards
- Sales Reports
- Customer Journey Insights
- Retention & Loyalty Analysis

2. Level 1 DFD (Detailed Flow)

External Entities:

- Customers
- Retail Stores
- E-commerce Platforms
- Market Research Agencies
- Apple India

Processes:

1. Data Collection

- Collect sales transactions
- Gather demographic information
- Collect feedback & ratings

2. Data Processing

- Remove duplicates
- Handle missing values
- Categorize age groups
- Segment regions

3. Data Storage

- Structured Dataset (Excel/CSV/Database)

4. Data Visualization (Tableau)

- Import cleaned dataset
- Create dashboards
- Build customer journey funnel
- Generate KPI metrics

3. Customer Journey Data Flow

Awareness Data → Consideration Data → Purchase Data →

Customer Experience Data → Loyalty & Retention Data

All stages feed into the Tableau dashboard for funnel and retention analysis.

Conclusion:

The Data Flow Diagram explains how raw data related to iPhone sales and customer behavior in India is collected, processed, stored, and transformed into meaningful insights using Tableau.
