

Revolution: A Data-Driven Exploration of Apple iPhone's Impact in India (Using Tableau)

Project Development Phase

1. Introduction to Development Phase

- This phase focuses on implementing the project plan by collecting data, preparing datasets, and building interactive dashboards in Tableau.
- It transforms raw data into meaningful insights about iPhone growth and impact in India.

2. Data Collection & Integration

- Sources include Apple Annual Reports, IDC, Counterpoint, and Government trade reports.
- Data includes sales figures, market share, export statistics, manufacturing data, and pricing details.
- All datasets were merged into structured Excel/CSV format.

3. Data Cleaning & Preparation

- Removed duplicates and handled missing values.
- Standardized currency format (₹ INR).
- Formatted date columns.
- Created calculated fields such as Growth Rate and Revenue Growth.

4. Dashboard Development in Tableau

- Imported cleaned dataset into Tableau.
- Created worksheets for Sales Trend, Market Share, Economic Impact, and Consumer Insights.
- Developed visualizations like line charts, bar charts, pie charts, maps, and scatter plots.

5. KPI Development

- Total Revenue (₹).
- Annual Growth Rate (%).
- Market Share (%).
- Units Manufactured in India.

- Export Revenue.

6. Testing & Validation

- Verified calculated fields.
- Cross-checked totals with reports.
- Tested filters and interactive features.

7. User Interaction Features

- Year filter, Brand filter, Model filter.
- Drill-down analysis.
- Interactive tooltips.

8. Final Output

- Interactive Tableau dashboard file (.twbx).
- Clean dataset (Excel/CSV).
- Analytical insights report.
- Presentation slides.

9. Conclusion of Development Phase

- Successfully developed interactive dashboards showing iPhone growth and economic impact in India.
- Provides meaningful insights for data-driven decision making.
