

IRevolution: A Data-Driven Exploration of Apple's iPhone Impact in India Using Tableau – Performance Test

1. Project Overview

Objective: Analyze the impact of Apple's iPhone in India on consumer behavior, market share, economic indicators, and regional trends using Tableau visualizations and evaluate dashboard performance and usability.

2. Data Sources & Collection

• Market & Sales Data: Annual sales, market share, unit shipments, revenue. • Economic & Consumer Data: Average Selling Price (ASP), income levels, demographics. • Usage Data: App Store downloads, engagement indicators. • Supplementary Data: Brand sentiment, reseller data.

3. Key Questions

• How has iPhone market share grown over time? • Which regions show highest adoption? • Is there correlation between income and adoption? • How does pricing affect sales? • What models are most popular?

4. Tableau Dashboard Design

Dashboard 1: Sales & Share Trend (Line charts, area charts, filters) Dashboard 2: Regional Insights (Choropleth map) Dashboard 3: Price & Consumer Analysis (Scatterplots, box plots) Dashboard 4: Search & Sentiment Trends

5. Performance Testing in Tableau

Tools: Tableau Performance Recorder, Desktop Analyzer, Server Logs. Metrics: Load time, Query time, CPU usage, Interactive response time. Optimization: Use extracts, simplify calculations, limit

marks, aggregate data.

6. Deliverables

• Clean datasets • Tableau Workbook (.twbx) • Performance report • Dashboard visuals • Final written report or presentation
